

Jetpay – a backend for instant crypto payments and invoicing on TON, built by Dzeta.Tech to simplify on-chain transactions for Telegram Mini Apps and real-time payment aggregation.

Key Advantages

- **Instant on-chain payments**
Fast TON transactions with no external delays.
- **Real-time payment aggregation**
Track, collect, and unify all payments across multiple wallets via a single API.
- **Unified backend for Telegram Mini Apps**
A ready-to-use infrastructure that removes the need to build your own TON payment logic.
- **Smart invoicing & billing**
Create invoices, validate incoming payments automatically, and generate single-use or recurring payment links.

Security & Reliability

- **Decentralized logic on TON (no private keys stored on servers).**
- **Automated transaction validation with protection against double-spend and fraudulent activity.**
